

SDGs around the world

Introduction

Provide a recap the 17 Sustainable Development Goals using the [resources available](#) and discuss the importance of a global effort towards reaching the goals.

Research the work of other nations

Encourage Young STEM Leaders to choose a country and research how they are making progress towards each of the Sustainable Development Goals as well as the challenges or barriers that they may face. Some prompting questions could be:

- What challenges do certain countries face due to factors like population, economy, geography, climate? For example:
 - Poverty faced in African regions.
 - Population density in India.
- What misconceptions might we have about some countries?

This [interactive map](#) may be useful for starting conversations.

Going further

- Learners could create a sustainability map as a group to illustrate progress towards the SDGs around the world.
